## BRYSTON VINTAGE - 'BACK TO THE FUTURE'

### Very Early Version of the Bryston 4B

There are three options of upgrades available in our

### 'Back To The Future'

program.

All options can be mixed or matched

**1.** Complete check out of all electrical and mechanical functions and replacement of appropriate parts.

Example: filter caps, rear panel switches, power cord, power switch, removal, cleaning, and re-application of thermal paste on all the currently installed power output devices. Plus any other areas where the vintage amplifier does not meet the original performance criteria.

Cost \$1000 US Funds

**2.** Cosmetic Upgrade includes a reworked faceplate, top and handles.

This involves a total refinishing of the current hardware on your vintage amplifier. This does NOT include Chassis or Back Panel or Heatsinks. We will do our best to fix dents, imperfections, bends etc.

Faceplate color change is available.

Cost \$600 US Funds

**3.** Output Power Transistors replaced with the most recent applicable power devices.

This involves the complete dismantling and reassembly of the amplifiers heatsinks and the removal of the older power transistors.

All the output power transistors are then replaced with the most up to date applicable versions.

Cost \$400 US Funds

Payment can be made with either PayPal or Credit Card.  
Please contact Melissa for payment
