

Leave your computer at work

Bryston's BDP-1USB and BDP-2 digital music players just got better. **Welcome the BOT-1.** The Bryston Optical Transport connects to your BDP-1 or BDP-2 and adds three great features:

One-touch CD Rips

No computer or specialized software is **required** to rip your discs directly to the storage attached to the BDP or your NAS. Once configured with your preferences, rip discs with a single button press.

Direct CD Playback

Play CDs at the same top quality as your ripped tracks. CDs are buffered and played directly from system memory making superior sound versus traditional CD players.

Burn Your Playlists

Build great playlists and burn them to CD-R discs to take in the car, on vacation, or elsewhere. Enjoy digital music without being chained to your computer.
