

BRYSTON

BryFi Wireless Networked Audio

Imagine high performance loudspeakers, powerful amplifiers and networked, lossless digital audio all neatly packaged into a single unit small enough for a desktop but sounds big enough to fill a whole room.

This was our dream for the new BryFi - a wireless audio system built from our widely heralded Mini A loudspeakers.

The BryFi includes two full Mini A loudspeakers (Two 6.5" bass drivers, two 3.5" midranges, and two 1" titanium dome tweeters), a 2x75 Watt amplifier, and a bit perfect digital audio system based on the Raspberry Pi.

The BryFi can connect to your NAS for your personal music collection, stream internet radio, and is AirPlay compatible.

BryFi can even host its own wireless network so you can stream to it when you're away from home. Two optional battery packs can be installed so you can enjoy high quality sound wherever you are.

Control the unit with your smartphone or tablet with a dedicated application.

Features include:

- 192kHz 24 Bit High Resolution compatible.
- WiFi and Ethernet connectivity
- USB or NAS music library connectivity
- 75 Watt x 2 amplifier drives built in 3-way Bryston Mini A Loudspeakers.
- Portable. Optional internal battery packs available
- Airplay, UPnP compatible for streaming.
