

What's Coming Soon from **TARGET** AUDIO PRODUCTS

Anybody serious about isolating their turntable should strongly consider a wall-mount shelf like Target's venerable VW model. A welded steel frame is screwed directly into your wall studs (16 inch OC) in 4 places. A Heavy steel isolation shelf frame bolts onto the wall-mounted frame. Inset and placed upon upturned spikes rests a 3/4" MDF shelf insert upon which you place your turntable or other audio equipment. The VW is painted with a durable black textured powdercoat and the MDF shelf insert is laminated to cosmetically match.

VW Vertical Wall Shelf

Audio electronics need to be placed upon a sturdy rigid platform to securely resist resonance. Target's new ESV 60 (24" tall) and ESV 90 (36" tall) equipment racks include 4 2" x 3" profile steel legs and include 3 component shelves each. Each CS component shelf features a thick steel frame into which a thick, laminated MDF shelf is inserted. ESV 60 racks can support up to 2 additional CS shelves and ESV 90 racks and support up to 3 additional shelves. Optional spikes or casters are also available.

If you require additional isolation, Replace shelves with the even more rugged IS Isolation shelf. Constructed of the same 1 x 2 inch steel as the VW, this unit supports a 3/4 inch thick MDF shelf on spikes which is ideal for particularly vibration sensitive equipment such as tube preamplifiers and turntables.

Optional IS Isolation Shelf

ESV 90 Equipment Rack with 3 optional CS shelves

What's Coming Soon from **TARGET** AUDIO PRODUCTS

Showcase your large amplifiers or power conditioners on a Target AS floor stand. These amplifier stands are constructed with the same frame and shelf insert as our standard CS shelves found in the equipment racks, but they also include 4 chrome plated spikes threaded into the bottom to elevate and isolate your equipment in an attractive but functional way.

AS Amplifier Stand

Big speakers need big stands. In addition to the high mass Target loudspeaker stands provide, the extra footprint of the optional machined aluminum stance plates will give your speakers and stands a wider base to prevent tipping.

Add some style to your stands with the Bling Thing 2.0 kit which includes chrome plated spikes and matching caps which simplify leveling and elevate the appearance of your equipment. Can be used with or without Stance Plates.

Stance Plate and Bling Thing 2.0

Don't let hardwood or tile floors keep you from using spikes under your speakers or stands. Target's Floor Protection Footers are powder coated steel with a rubber isolator that accept spikes on top but provide a protective surface beneath that keeps your speakers in place but won't damage your floors. Available in 4 packs.

Spike Shoes
