

A Lifetime of Music

MEMO: To All Bryston Customers

SUBJECT: Bryston 28B's – Customer Response - South Korea

December 2018

“Hi James,

I recently added the Bryston 28B Mono Amplifiers to my audio system.

I was using Devialet 1000 pro French products which is also claiming 1000watts/channel mono.

The improvement in the Bryston 28B amplifier is a very solid bottom end which made the overall tonal balance much better than before and dynamic capability with authority is outstanding on my B&W speakers.

Because of my poor English I cannot express as clearly as I want my feelings and thoughts of the improvements that the Bryston 28B amplifier makes in my system.

With the previous Devialet amplifiers the sound was much thinner and not very coherent.

I am now expecting more improvements from the Bryston 28B as burn-in progress continues. Also my new Linn Akurate DSM DAC+Pre) also needs some burning in.

Thank you for making a great amplifier.

**Regards
Sung”**
