

A Lifetime of Music

MEMO: To All Bryston Customers

SUBJECT: Bryston Model T 'ACTIVE' – Customer Feedback

July, 2019

Hi James,

I picked up the Bryston BAX-1 Active Crossover today from Ron at Altronics.

Ron said he spoke to Bryston and advised Bryston of my setup and that the BAX-1 was already programmed for me. Basically plug and play.

So that's what I did and I remembered to reverse the cables for the one amplifier. I powered up everything and the lights on the BAX started in red and then went to yellow and then turned green. I put a CD into the player and listened to a few songs that I use to gage the quality of speakers and I have only one word.

WOW !!!!

It is simply more of everything with much greater detail, imaging and presentation than I ever imagined. It is not just an incremental increase but a whole new ball game. The speakers now coax out detailed sounds in the music that I never heard before. Bass, midrange and highs are all more pronounced and present.

Well done guys you deserve a resounding pat on the back. I am officially addicted.

I will put the speakers through their paces this weekend in more arduous testing.

Sincerely,
Dave
