

A Lifetime of Music

MEMO: To All Bryston Customers
SUBJECT: New Bryston Tweeter

May 2014

Hi Folks,

Over the last year we have been developing a new tweeter for the Model T and Model A Series speakers.

Model A Speakers currently in the market already incorporate this new design.

The new tweeter has 4 major changes:

1. A die-cast aluminum face plate for both better rigidity and for cooling. It functions as a heat sink for the tweeter.

2. A new horn design to provide smoother off-axis response above 12 kHz,

3. A larger rear chamber that lowers the resonance frequency further below the crossover region.

4. The new tweeter can also handle significantly more power than the older version.

The new tweeter is retro-fit-able to all existing Model T's in the field and are being utilized in all current production.

Price of the new replacement tweeter is \$90.00 Each.
