

BRYSTON

A Lifetime of Music

MEMO: To All Bryston Customers

SUBJECT: Announcing Bryston Integrated Audio Device

May 2015

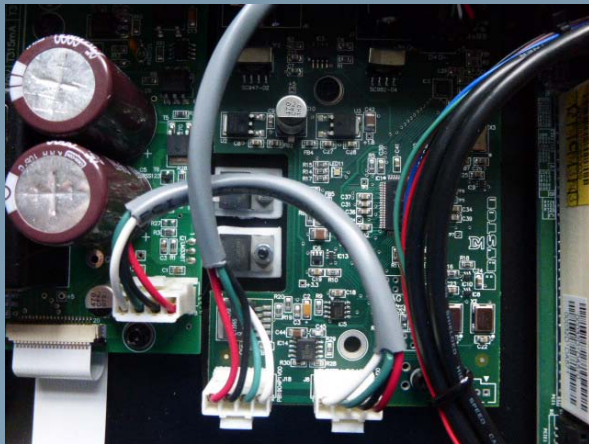

Hi Folks,

As I posted earlier we have been working on a Bryston proprietary “Integrated Audio Device” card to replace the current two-piece ‘Soundcard’ and ‘SPDIF interface module’ (AES/BNC) utilized in our current BDP-2 Digital Player.

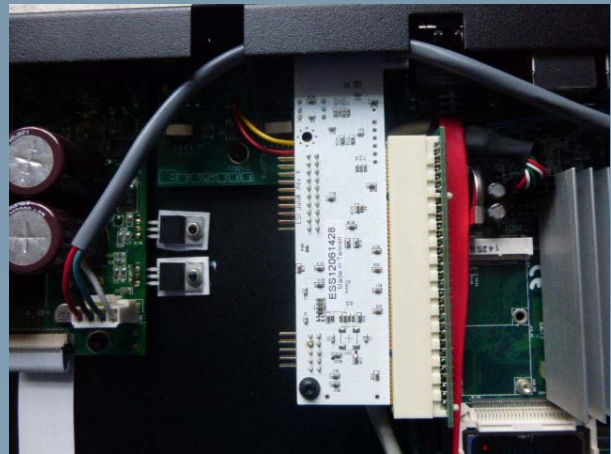

BENEFITS:

- No reliance on the quality level of third party products or having to modify said products
- Improve the performance by hand selecting and testing all the components in house
- Eliminates 3 connection points
- Integrates the output module and the sound processing section into one circuit instead of two.
- The Bryston audio device is directly powered by the high quality linear power supply rather than the motherboard.

Please see below a picture of new sound device and previous sound card.

New Card

Old Juli@ Card

Any current BDP-2 owners may have their units upgraded if desired.
