MEMO: To All Bryston Customers

SUBJECT: Announcing the Bryston Mini T Active Speaker

November 2017

Hi Folks,

I am pleased to announce the introduction of the “Bryston Mini T ACTIVE” speaker.

The Active Mini T joins the Model T and Middle T Active systems to round out our Bryston Active Series of speakers.

These Bryston active speakers are used in conjunction with our dedicated BAX-1 Digital Active Crossover and six channels of amplification to provide a level of performance unobtainable with the current passive systems available today.

Active loudspeakers are those in which the drivers (woofer, mid-range, tweeter) are directly connected to the output of an amplifier. There are no "passive" components (large resistors, capacitors, coils etc.) in the signal path between the amplifier and the loudspeaker driver(s).

An Active System can bring a much higher resolution and dynamic control to your audio system.

The differences are not subtle and speakers like the Bryston Model T Active loudspeakers take the performance to the next level of accuracy.
