MEMO: To All Bryston Customers

SUBJECT: Bryston Active Model T Demo – TAVES 2017

TAVES Consumer Electronics Show 2017 Show

Report by George de Sa, NOVO Magazine

Bryston Limited

With a friendly greeting from Brian Russell, President of Bryston, I entered their room and found a chair beside James Tanner, VP Marketing & Sales.

James was demonstrating Bryston's Active Speaker System, this year with something new, an all-new 3-channel amplifier, the 21B3. Since a Bryston Active speaker setup requires three amplified channels per side to drive it the 21B3 fulfills this need with a single-chassis 3-channel form-factor.

There are two Bryston Active systems currently available – the Model-T and the Middle-T (and soon the Mini T). The system playing was a Model-T Active system (a pair of crossover-less

Model-T speakers with a Bryston BAX-1 DSP Active Crossover.

The speakers were finished in an attractive espresso brown wood veneer.

With a Bryston BDP-3 digital player, BDA-3 DAC and BP26 preamp, this system delivered spectacular sound-staging and clarity; projecting images well above my head and with a level of immediacy and control that was mesmerizing!

Bryston was also showing off on static display, their new 24B3 amplifier (\$9,000), with 6-channels of amplification. The 24B3 is meant to serve as a lower cost alternative for the 21B3 in the Bryston Active Speaker Systems, delivering the 3-channels of amplification per side at half the price of a 21B3.

There were two new active (BIPOLE) subwoofers also on display – Model T 12", with 2 x 12" drivers and a 600 Watt amplifier and a Mini T subwoofer with twin 8" drivers and 600 Watts of power.
